

User Note:

The Transit-Enhanced Network is shown on the map as a bold black line. Additional layers such as rail and train lines were added to illustrate how all the different networks relate to one another. Each layer in this pdf can be turned “on and off” by clicking on the layers icon to the left (in Adobe Acrobat) and checking/unchecking the box next to each layer. We want your feedback on whether or not these streets should receive enhancements that boost the functionality for public transit use. Please give us your thoughts on our online town hall, ideas.la2b.org. The initial public review will continue through March 2013.
